Driving Next Generation Data Centers
Toward 400G

OverviewProductsBenefitsSolutionsServices

What is 400G DCI

As cloud storage, AI and 5G rapidly evolve, current transport abilities can no longer meet the demand for network capacity in data centers. The next generation 400G network equipment offers greater efficiency, more scalable features, larger capacity and faster network failure points, addressing the massive bandwidth needs of network facility operators. When building more demanding network environments, 400G provides the foundation for high flexibility and customer selectivity, making it an ideal solution.

400G DCI Features

Large Scale & High Density

Easily build large scale and high-density networks, providing infrastructure and management.

Flexibility & Agility

Flexible connection of multiple devices with high capacity and four times the transfer rate of 100G.

Space Saving & Scalability

With expansion capabilities, using less space to easily and efficiently handle daily data surges.

Typical Network Solution

The solution is suitable for 400G to 4× 100G connections, improving port utilization and enabling rapid scaling. It maximizes redundancy and increases the efficiency of this interconnect between 100G and 400G network upgrades. It simplifies the complexity of network integration and setup, making it easy to meet your overall requirements.

Services and Support

FS Test Lab

Our lab is equipped with professional test equipment to complete performance and compatibility testing for each optic in its intended application.
